

DeTaSECURE

# Trainings & Awareness Program

Every business, knowingly or without knowing has a certain amount of data exposed in public.

We fix that! and improve your data protection without any resistance to your business continuity.

# WHO ARE WE?

We are accomplished cyber security experts, with industry experience in leadership roles in enterprises PwC, PayPal, Walmart, Thoughtworks and EY, taking care of cyber security practices and global delivery in sectors like web3, finance, e-commerce, healthcare, insurance and telecom domains. We help companies in discovering their exposed data over the Internet. Post analysis, we score them on the basis of their existing security frameworks and recommend ways to improve their overall security posture. We also provide a threat protection program to make companies ready for any unforeseen future attacks.

# Trainings & Awareness Program

Our training guarantees that all members receive the proper training about our privacy programme, including information about its objectives, what it entails, and what duties are expected of them. The instruction must be current, accurate, and pertinent. For your policies and processes to be truly followed, training and awareness are crucial. All of our eLearning awareness training courses were created by experts and are intended to provide your staff with the information they need to safeguard the privacy data of your organisation while carrying out their duties, in accordance with the applicable standards, laws, and IT- and cybersecurity best practises. Our staff awareness e-learning courses are designed to give staff members continuous, correct training, enabling your organisation to follow regulations or adhere to international standards.

## Security leadership and management

How to enhance security leadership capabilities and build a security practice inside the organization. How to implement a zero-trust security model.

## Vulnerability Analysis and Penetration Testing (Network/Web/Mobile)

How to do intensive security assessment and testing of products and networks.

## Tactical OSINT For Pentesters

## OSINT for Blue Teams

Open Source Intelligence training targeted towards defensive security teams such as Threat Hunters, SoC Analysts, Threat Research, etc.

# Trainings & Awareness Program

## AI/ML and analytics for cybersecurity professionals

How to apply the knowledge of AI/ML in security various use cases.

## Secure coding practices

How to write secure code in various platforms like JAVA, NodeJS, C++, etc

## Ransomware Awareness Training and Simulation

Today, one of the main targets of rising ransomware attacks are organizations all around the world. Additionally, cybercriminals don't give a damn about the people and organizations they are attacking as long as their objectives are met. As a result, it is crucial that we continue to remain vigilant and stay one step ahead of online criminals. The key is to regularly provide personnel with Ransomware Awareness Training and Simulation. So, how to prevent ransomware attacks and create a cyber-secure environment? By monitoring their progress and offering extra training as necessary, it provides them with the knowledge and abilities they need. This is done through a real-time ransomware simulation campaign and awareness training.

## Vishing Awareness Simulation and Training

Vishing assaults have increased globally over the previous few years. Similar to email phishing, vishing or phone scam is a form of social engineering attack. The purpose of the attack is to steal financial and personal information. Threat actors frequently use phone calls as a means of tricking victims into opening or downloading harmful attachments or links

## Security Architecture Design and Threat Modelling

How to design a strong secured architecture, identify possible threats through Threat Modelling, and mitigate them using appropriate controls.

## Phishing Awareness Training and Simulation

Your staff members must be able to recognize and thwart phishing attempts that could jeopardise the confidentiality of both your customers and your company's data. The goal of DeTaSECURE's phishing awareness training and simulation is to educate your staff on the current phishing attacks and how they operate.

## OSINT for Blue Teams

Open Source Intelligence training targeted towards defensive security teams such as Threat Hunters, SoC Analysts, Threat Research, etc.

# OUR PROCESS

## SECURITY AWARENESS AND TRAINING

### TRAINING PROGRAM

#### BASIC TRAINING

Acquire general skills. This can be done at the time of employee on-boarding

#### INITIATION SESSION

Get information on specific topics. This can be achieved through online modules

#### CONTINUOUS EDUCATION

Maintaining skills and acquire specific skills. This can be done through classroom sessions or discussions

#### Awareness Program

Newsletters  
Screensavers & wallpapers Posters & Mailers  
Quiz

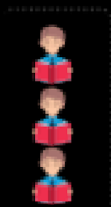

#### MEETINGS AND DISCUSSIONS

Meetings & Insights  
Workshops  
Rewards & recognition for contribution and participation in events

#### Train the trainers program

train the trainers

train the trainees
